How to send in a hair sample:

The sample should be taken in small portions from several areas of the horse's mane (see above diagram). Cut the hair as close to the skin as possible. The length of the hair should not exceed 2 inches. The amount of hair necessary for an accurate analysis is approximately one tablespoon. Sampling scissors should be high quality stainless steel to avoid possible contamination from rusty scissors. Hair should not be sampled from other parts of the body, as it may not reflect an accurate representation of mineral balances.

Put the sample in an envelope or plastic bag labeled with the horse's name and your name. Fill out the submittal form, and then send the submittal form, hair sample, and payment to Uckele Health & Nutrition. Allow up to 4 weeks for the results to be processed. The results will include a graph, recommendation/summary page, and a phone consultation with a nutritionist explaining the results. The cost of each hair mineral analysis is \$149.95.
